- SMD Components
- 12V LED, 5V ATmega328
- 12V->5V buck converter
- MIDI In, MIDI through

Show and Tell

The good and the ugly

- It works! (More or less)
- Limited ATmega memory and not so much performance to spare.
- Use of SoftwareSerial was a mistake, MIDI messages are getting dropped.
- Not prototyping early enough (although we simply lacked components for that)

That's all for now

Thank you!
